

## **Bäckfallet Elektronik AB**

### **Conflict minerals Policy statement and requirement**

Bäckfallet Elektronik AB conduct business fairly and ethically, respect human rights, comply with laws and regulations, and follow a rigorous Code of Conduct.

Bäckfallet Elektronik AB do not source directly from smelters or mines. We therefore require that our suppliers have a Conflict Minerals Policy. On that way we set pressure to our supplier to have a conflict-free supply chain.

If products supplied to Bäckfallet Elektronik AB contain tantalum, tin, tungsten or gold (3TG), the minerals must originate outside the DRC, come from scrap or recycled sources, or be supplied from smelters that have been validated by an independent private sector party to be conflict-free.

All new suppliers shall after request send a Conflict Minerals Policy that will be reviewed.

Solder tin suppliers must also submit a CMRT or equivalent document which smelter is listed. This will be requested once a year.

As far as we know, based on received 3TG information from our supplier, are products we produce 3TG conflict free.
